

GARDEN SOLARS

The advantages of WOLTA® GARDEN solar lawn lighting

A solar panel picks sunlight up during the day, keeping it in the installed rechargeable battery. In the evening, when a natural lighting stream is decreasing, photoelement turns the fixture automatically. It lights whole night through, using the saved energy.

It's not necessary to have the direct sun beams to charge the battery. The fixture can be charged by the solar energy even in winter or in gloomy weather. Low voltage and wires absence makes the solar lawn lightings absolutely safe for humans and pets.
